SIP Environment

Asterisk 18.12

VitalPBX 4

Debian 11

ARM Support

PHP 8.1

Full PJSIP environment

Asterisk 18.16

90% Faster Apply Changes

Changing Operating Systems

Why the change to Debian?

The End of CentOS.

- CentOS 7 has an End-of-Life for 2024.
- CentOS 8 was DOA (Dead on Arrival) and didn't have effective support.

The Evolution of SIP

Moving to PJSIP

chan_sip: deprecated

- chan_sip was deprecated from Asterisk since version 17.
- chan_sip will no longer be available since Asterisk 21.

The Advantages of PJSIP

- Supported by Asterisk and adds new features.
- Easy IP Authentication
- Multiple Devices with one account
- Intuitive NAT environments
- WebRTC Support
- ALL SIP DEVICES WORK WITH PJSIP!

The new in VitalPBX 4.

New Features

Highlight

Two-Factor Authentication

Highlight

More Branding Customization

Highlight

Re-Install Add-Ons

Highlight

Whitelist/Blacklist IP Addresses

Highlight

Hotel Management

Hotel Management

- Add-On made alongside Char and their PMSLink gateway software
- Connect with Over 150 PMS applications
- Create Codes

<https://charpmslink.com>

The background is a dark green, atmospheric landscape. In the foreground, a path or road leads towards a range of dark mountains in the distance. The sky is a deep, dark green with some faint, wispy clouds. A white line graphic, consisting of a long, thin, slightly curved shape, starts from the left side and extends towards the right, passing behind the text. The overall mood is serene and futuristic.
